 Mar 2016 - pres  Jaipur, India

Dotsquares is a software development company based in USA & Melbourne Australia with the headquarters of the company based in United Kingdom and three development centers in India. Dotsquares work in customize software development with lots of experience in Travel websites, CRM Applications, E-Commerce websites and CMS Websites.

Projects

- Luxtipper (Travel Booking Website)** - Luxtripper is a luxury travel company that operates an online travel booking site which matches users with suitable holiday destinations and is based in London, UK. Luxtripper was built upon more than five different travel API integrated in one go, when user searches for a destination it will provide merged results for different provider. Luxtripper offers a personalized service where we can tailor the holiday to your needs. We do this through our Where To Go When search technology and with the help of a Travel Consultant.

Responsibilities:

- I was working as an outsourced back end developer with London team.
- Integration of different hotel API in the system.
- Worked on some front end part of admin section.
- Communication with London team.

Tech's & tools:         

- OLGA (mygiving online)** - MyGiving.Online is our complete online donations management system, designed to re-imagine the way to handle donations and giving for organization by opening up new opportunities and saving time. When user has registered a MyGiving.Online account for your church or charity he/she can then create new users and give them customized permissions to access the parts of the system that he/she decide. User can use MyGiving.Online to record all of your donors (whether you can claim Gift Aid on their donations or not). You can then record/import all of the donations, whether by envelope, cash, Standing Order, Direct Debit, Credit/Debit card, PayPal, GASDS eligible, etc.

Responsibilities:

- Worked on admin donation part, data import from old system utility.
- Implemented payment getaway to get the donation.
- Communication with client and helped co- developers.

Tech's & tools:        

- Travel Management System-** Except above projects I also worked parallel on Travel Management System which is In-House Product that can be later customized as per user requirement with different API provider and customization, this system provides hotel and flights. My Responsibilities for this project was to create it from scratch to enable it to make plug able with different API provider.

Responsibilities:

- Started from scratch.
- Integrated different APIs in the system to make work together on single search.

Tech's & tools:
